# Jonathan Carson-McGeary

Senior Frontend Engineer
jonathan@mcgeary.dev | Glasgow / Remote | github.com/jonvfvn

## Professional summary

Senior frontend engineer specialising in React and TypeScript, leading frontend delivery at DataXray across AI-powered data extraction, enterprise administration and shared platform components. Takes complex workflows from discovery through to production, combining product delivery with API integration, automated testing and frontend architecture.

## Professional experience

### Software Engineer | DataXray (formerly Ohalo)

May 2024 - Present | Remote

- Lead frontend delivery within a product pod, owning implementation of complex user workflows and contributing to the shared React and TypeScript platform.
- Led an admin console redesign from discovery and stakeholder buy-in through to production, simplifying complex configuration workflows.
- Built interfaces that let users configure AI-powered data extraction, monitor extraction jobs and export structured results.
- Enabled users to configure multiple AI providers and assign models to extractors individually or in bulk through model management interfaces.
- Built classification import/export workflows so users can transfer configuration between environments, with end-to-end tests covering the transfer round trip.
- Migrated documentation to Fumadocs and Next.js, adding authenticated access and synchronising sign-up profiles to HubSpot for sales follow-up.
- Made OpenAPI specifications the source of truth for model API types, replacing duplicated TypeScript definitions and integrating generation into CI and container builds.
- Extended shared table components so grouped search results stay visible, related rows remain together during pagination, and expansion controls support keyboard and screen reader users.
- Added automated coverage for extractor creation, editing and deletion, alongside component and regression tests for model forms and shared UI behaviour.
- Established a frontend engineering forum to align development practices and turn shared platform concerns into initiatives, including the admin console migration.

### NatWest Group

January 2020 - April 2024

Web Application Developer | January 2022 - April 2024 | Remote

Digital Developer and Consultant | January 2020 - January 2022 | Edinburgh

- Built document editing and KPI visualisation features in a React and TypeScript CMS used by senior executives.
- Contributed to the CMS migration to TypeScript, introducing static typing into the platform's development workflow.
- Built SharePoint intranet tools with SPFx and dashboards with D3.js and Chart.js to present performance data to internal stakeholders.
- Developed internal tools and Workplace from Meta chatbots to automate employee support workflows.
- Integrated internal platforms using REST APIs, Node.js, Express, AWS and PowerShell, and implemented platforms to meet compliance requirements.

## Technical skills

- Frontend: TypeScript, React, Next.js, Vite, Tailwind CSS
- Architecture and integration: frontend architecture, REST APIs, OpenAPI, Firebase, HubSpot
- Testing and delivery: Playwright, Vitest, CI/CD, shared component development
- Documentation: Fumadocs, Next.js, Zod

## Education

BSc in Computing | Glasgow Caledonian University
